

EQUINE VETERINARY CARE

AT FAIR HILL TRAINING CENTER

Gastroscopy "Stomach Scope"

Note:

Please call EVC with any questions or concerns. As with any diagnostic procedure, complications can develop and early intervention can help return your patient to health more rapidly.

- * Train normally.

- * Keep patient in a stall overnight before procedure.

- * **Pull all feed** (grain and forage ration) **18 hours** before procedure and **muzzle** regardless of bedding that is being used in stall. Patient will still be able to drink water through the muzzle.

- * **Pull water 6 hours** before procedure and **remain muzzled**.

- * Continue with any medications that you may be using.

Note:

EVC can provide you with a muzzle to use overnight before the procedure.

Patient may be immediately offered feed and water after recovering from the sedation used during the procedure. Return to normal training.
